<b>The current status of my school is:</b>						
All Distance Learning	26					
Fully Open	1					
Hybrid	1					
<b>I am (check all that apply):</b>						
still tending to the garden on campus	22					
NOT tending to the garden on campus	5					
making educational videos for my students	11					
teaching classes virtually/online	8					
creating my own original content/curriculum for teaching	11					
using purchased/gleaned curriculum/lessons for my classes	8					
NOT teaching virtually	8					
Other		Giving links to curriculum and craft and at home indoor/outdoor activities for families via Facebook and email	The principal fully supports a Wednesday in the Garden program. Up to 8 participants, (parent required to accompany their children) can come to one of 2 one-hour sessions on Wed. They join me in starting seeds in flats, weeding, potting up their own succulent plants to take home, etc.	I am a volunteer and the teacher is teaching hard time virtually she is creating her own content	I'm a classroom teacher...barely have time these days but at least trying to keep things watered .	Modifying previously created curriculum

Web Captioner						
Jamboard						
<b>Challenges:</b>		I find it challenging to know what sorts of materials and parent support my students have at home. I also gave each of my 4th through 8th grade students a journal, so they can do reflection activities away from a screen. I really want to serve my school community by providing non-screen time for students, which is what I feel I provide for students during a normal school year. In my thinking, I oscillate between doing the lessons I would normally do with the students in the garden setting, and doing basic ecoliteracy lessons that I think are accessible to a wide population of students.	As a contracted garden coordinator, I don't have access to google classroom, classlink, illuminate, etc.	I'm not enough student views or teacher involvement.	There is SO much to learn. Challenges?? Wifi dropping, Google takes too many clicks to complete a single task and there is no resource personnel from Google to answer questions, kids having login issues and Zoom dropping off world wide...sigh...too much to list.	Main challenge is keeping students engaged and interested in the garden when they are unable to be onsite.
<b>I could use some teaching support in the following categories...(please check all that apply)</b>						
Online lesson plans/resources	10					

Non-digital tools/ teaching methods	2				
Teaching in a Distance Learning setting	8				
NGSS	6				
Cooking/ Nutrition/ Food Literacy	4				
Eco-Literacy	6				
Harvest of the Month	8				
Botany	5				
Social, Emotional & Mindfulness Learning	7				
Other		Time to Plan	Time to experiment with platforms	soil plant and seed resources	
<b>I am being paid to:</b>					
maintain the garden ONLY	3				
teach my students ONLY	3				
maintain the garden AND teach regular classes	14				
I am NOT being paid	6				
<b>I am in need of: (check all that apply)</b>					
Plants	16				
Seeds	9				
Compost	14				
Cover Crop	6				
Irrigation Installation & Repair	8				
Volunteer help in the garden	7				
Infrastructure repair (describe more below)	1				
Infrastructure building (describe more below)	3				
Curriculum/Lesson Plans	10				
Professional Development Support	6				
Tech support	2				
Other		Getting approved for fruit trees	Our garden is getting moved and we need all of the above assistance	Help designing new garden and sourcing materials	A job
<b>Please describe your needs in more detail here:</b>		<p>I hope to grow far more food in this year's garden, since we are not teaching lessons. I hope to share it. I need fall starts now. Also, weeds are a big problem in our garden and without students I am getting behind in weed control. A couple of volunteers for a couple of hours would be a huge help.</p>	<p>I am most interested in ideas on how to keep students engaged and interested when I am just making videos for them. Videos are so different from physically being in a garden! They also all have different living situations, so I can't assume they have a home garden to care for. I want to give them ideas for fun ways to engage from home. If you all have some ideas or resources, I would love to hear them!</p> <p>I would also love to send home materials for kids to grow some kind of plant at home. Do you have any suggestions for something the kids would enjoy that is also pretty hardy and might survive a bit of over or under watering? I am also looking for a source of inexpensive pots for them. I will need to send home pots, soil, and seeds to facilitate this because not everyone can afford their own. I have 487 students!</p>	<p>I am a new garden coordinator this year, along with 1 other amazing woman. She is doing student time and I am campus maintenance. Currently the district won't allow me to bring fruit trees into the school garden, siting rodents and bees as being a nuisance that would be attracted to them. We have a peach tree and a lemon on campus already. They are not a nuisance. Our school, during non-Covid times, prepares a sampling of garden grown foods for the school to try every 2 weeks. I'd like to add apple trees, a plum, and a lime to broaden our options. If you have suggestions to help me win this battle, I'd love to hear. Thanks</p>
